

PROBLEM DEFINITION AND DOMAIN ANALYSIS

Before you can start analyzing your problem you have to understand the problem and its surroundings. The tools on this page can help you..

DEFINE PROBLEM ENVIRONMENT

ENVIRONMENT
Key Facts: Relevant information about client
Change Driver: Why the client needs to change

CLIENTS
Contracting body: Relevant information about client
Key Stakeholders: Why the client needs to change

SCOPE
Desired Outcomes: What the client would like to have
Hard facts: Delivery dates, main concerns, products

DOMAIN MODELING

Visual models can capture objects, information contained by objects and business rules that relate to those. Use them to create abstract representation of systems or organizations. You can use those to create a common understanding of the problem within discussions in your team and client.
